

Purging without **ASACLEAN**, is like... doing your laundry without detergent

You wouldn't try to clean your clothes without detergent. So why try to clean your injection molding machine or extruder without purging compound?

ASACLEAN, with its exclusive *SuperClean Technology*, rids your machinery of deposits that contribute to resin waste and contamination by foreign materials that can compromise color consistency. Plus, it makes color/resin transitions quick and

easy and virtually eliminates the need for machine overhauls. No other purging compound on the market is as safe and simple to use, yet has ASACLEAN's incredible cleaning power.

Whole lotta clean... for a whole lot less. Since you get an effective resin change with much lower material quantities, a small investment in ASACLEAN pays off big.
